DOMESTIC LPG PIPELINE

Service

An LPG gas pipeline system is a safer and more convenient solution for your home. The LPG cylinder is installed outside the building, and gas is supplied to the kitchen through a secure pipeline. Separate shut-off valves are provided both outside (near the cylinder) and inside the kitchen for quick and easy control during emergencies or maintenance. In the unlikely event of a gas leak, the gas disperses into the open atmosphere outside, reducing the risk of gas accumulation inside the house. This provides enhanced safety, convenience, and peace of mind for your family.

Commercial LPG Gas Pipeline – VOT Line System

Hi Tech Energy provides professional LPG Gas Pipeline Solutions for hotels, restaurants, commercial kitchens, catering units, and industrial food service facilities.

Our VOT Line System is designed by connecting multiple LPG cylinders safely through a bulk manifold installed at the rear side of the building, delivering an independent gas point to each burner. This ensures a stable gas supply and consistent pressure for smooth and efficient cooking operations.

The system enhances operational safety, minimizes gas wastage, improves fuel efficiency, and helps reduce overall LPG consumption. Since the cylinders are installed outside the kitchen, the cooking area remains cleaner, more spacious, and safer while making cylinder replacement quick and convenient.

Every installation is carried out using premium-grade SS seamless pipelines, high-quality pressure regulators, safety shut-off valves, and industry-standard components, ensuring reliable performance and long-term durability.

Hi Tech Energy – Safe. Smart. Economical

COMMERCIAL PIPELINE

INDUSTRIAL SOLUTIONS

SAFE. SMART. RELIABLE. ★

Safety-compliant LPG Cylinder Rooms integrated with Auto Shut-off and Gas Leak Alarm Systems ensure safe cylinder storage and uninterrupted gas supply.

RELIABLE GAS MANAGEMENT ★

We provide safe and reliable LPG Gas Pipeline systems for industrial machinery and production equipment. Our pipeline ensures a continuous gas supply, minimizes fuel wastage, improves operational efficiency, and reduces running costs. Hi Tech Energy delivers dependable solutions that enhance productivity, safety, and long-term profitability.

LABORATORY GAS LINE SYSTEM

The Chemistry Laboratory Gas Line System is designed to deliver a precise, controlled, and uninterrupted gas supply for laboratory experiments, research, and analytical applications. The installation incorporates centralized gas distribution, isolation valves, pressure regulation, and emergency shut-off provisions to ensure safe operation and accurate gas delivery at every workstation. Built with high-quality materials and engineered for long-term reliability, the system enhances laboratory efficiency while maintaining the highest standards of safety and operational control.

LOT (Liquid Off-Take) System

LOT PIPELINE

ENERGY SECURITY

The LOT (Liquid Off-Take) System is an advanced LPG pipeline solution designed for commercial and industrial applications with high gas consumption. It combines the benefits of bulk LPG storage with the flexibility of a multi-cylinder installation.

LOT SYSTEM FOR COMMERCIAL KITCHENS

The LOT (Liquid Off-Take) Cylinder Room is compact, space-saving, and requires minimal installation area. It is suitable for all types of applications, offering a safe, economical, and highly efficient LPG supply solution.

HEADER SYSTEMS

Plays a vital role in LPG gas pipeline systems.

INDUSTRIAL BACKBONE

LPG is drawn from the cylinders in liquid form and converted into gas through a vaporizer before distribution. This process ensures complete utilization of LPG, minimizes residual loss, and provides a continuous, efficient gas supply.

LPG RETICULATED SYSTEM

CENTRALIZED GAS PIPE LINE INSTALLATION

A Centralized LPG Gas Pipeline System supplies gas from a common cylinder bank to each apartment through individual gas meters. This allows residents to pay only for the LPG they actually consume, ensuring accurate usage monitoring and fair billing. The system offers greater convenience, reliable gas supply, and enhances the overall quality of living.

COMERCIAL LAB PIPELINE SYSTEM

GAS CONTROL PANEL SYSTEM

Our Gas Control Panel is designed to regulate, monitor, and distribute industrial and specialty gases safely and efficiently. Equipped with precision pressure regulators, gauges, isolation valves, and essential safety components, it ensures a stable gas supply, enhanced operational safety, and reliable performance for every application.

INDUSTRIAL LINE HEADER SYSTEM

Our Industrial Line Header System is designed to distribute gas efficiently from multiple cylinders or a centralized supply to various application points. Built with high-quality materials and installed in accordance with international safety standards, it ensures balanced gas distribution, stable pressure, continuous supply, and reliable system performance.

GAS LINE FILTRATION SYSTEM

A high-quality filtration system is installed to remove dust, moisture, oil particles, and other contaminants from the gas supply before it reaches the equipment. This helps protect sensitive instruments, ensures a clean and uninterrupted gas flow, improves system efficiency, and extends the service life of the entire pipeline system.

INDUSTRIAL GAS DISTRIBUTION SOLUTIONS

We provide complete pipeline solutions for all types of Industrial & Specialty Gases. Designed, installed, tested, and commissioned by our experienced technical experts in accordance with international safety standards, our pipeline systems ensure maximum safety, reliability, efficiency, and long-term performance for commercial and industrial applications.

OPPORTUNITIES

SCALABLE & CENTRALIZED GAS DISTRIBUTION

Our pipeline systems are designed for easy future expansion, allowing additional equipment or gas outlets to be integrated without major modifications. With a centralized gas distribution system, gas is supplied safely, efficiently, and systematically from a single source to multiple workstations.

Pathways to Expansion

REDUCED DOWNTIME & EASY MAINTENANCE

A continuous and stable gas supply minimizes production interruptions and ensures smooth equipment operation. The well-engineered pipeline layout also enables quick inspection, simplified maintenance, and efficient servicing, ensuring long-term reliability and performance.

FUTURE OUTLOOK

Future Expansion & System Upgrades

Our gas pipeline systems are designed with future expansion in mind, allowing easy integration of Fire Alarm Systems, Gas Leak Detection Systems, Automatic Shut-off Valves, Pressure Regulators, Control Panels, LPG Vaporizers, additional pipeline extensions, and other process equipment without major modifications. This flexible design enhances safety, improves operational efficiency, reduces future installation costs, and ensures reliable long-term performance as your facility grows.
